

waders, and just as cheerful. The Crows were able to scratch the snow aside and search out the grain in the fields. An inundated field, where weeds and grasses had been allowed to grow in bewildering confusion, afforded a brimming larder for Goldfinches, Tree Sparrows and Song Sparrows. Here they, too, were soon obliged to lift the soaked grass heads from the water, before their hunger could be satisfied. The dainty dress of the Goldfinch seemed very much out of place down among the rotting vegetation.

BRÜNNICH'S MURRE, *URIA LOMVIA* IN LORAIN COUNTY, OHIO.

It gives me great pleasure to announce a hitherto overlooked Lorain County record for this species. Mr. A. Hengartner, of Lorain, Ohio, informs me that on December 25, 1896, while passing along the lake shore some two miles west of Lorain, he came upon a company of six of these birds. Three were shot and one, which was some distance in from the water on the beach, was captured alive. The other two escaped. Of the four specimens captured, one is in the collection of the Lorain High School, and one has been presented to the Oberlin College Museum by Mr. Hengartner. The writer believes that this company of six individuals is the largest one on record for the 1896 inland flight of this maritime species.

NOTES FOR THE COMMITTEE ON VARIATION.

It would be a great favor if members who are willing to contribute to the work of the Committee on Variation would send in their names at an early date with some indication of the amount of song sparrow material at their disposal.

Measurements and examinations of even only one race are of value, for with the methods to be employed it is necessary to have a large number of specimens studied. In the co-operative method of study a member with only a few specimens can do work of value by reporting on what he does have. It is desirable to have material as widely repre-
